

BROMIC PORTABLE GAS HEATERS

Tungsten Smart-Heat™ Portable Heater

An excellent combination of design, utility, and efficiency, the **Bromic Tungsten Smart-Heat® Portable Gas Radiant Outdoor Heater** is a safe and effective way to spot-heat your dining or bar areas outside!

The Tungsten Smart-Heat™ Portable Gas Radiant Heater is the synthesis of cutting edge design, world-first engineering, and practical functionality. This heater can be adjusted to supply between 21,300 and 38,500 BTUs in a 180 sq. ft. area to keep customers warm during chilly evenings. The Tungsten Portable Heaters are up to 300% more efficient than traditional products. A simple repetitive spark ignitor guarantees reliable activation, while the high intensity ceramic burner delivers optimal heat with minimal heat loss. Adjustable heat controls and head let you set comfortable heat to a specific area, while the exterior is designed specifically for wind resistance to help heat reach its destination.

HEATERS

For easy maneuverability, the whole heater is mounted on casters so it can easily be moved to and from storage, and it can also be quickly disassembled and stored during the off-season. A built-in flame failure mechanism helps prevent mechanical malfunction, and thanks to its anti-tilt structure, you can be sure that once it is seated, this heater will remain sturdy and in place. Operators enjoy lower running costs and higher wind resistance, while patrons benefit from the gentler spread of warmth and subtle styling.

NEE #	Heating Area	BTU	Ignition	Fuel Type	Height	Width	Depth	Weight
